* For every 10 Split Inserts ("SRI *.*"), order one (1) can of AC FASTFUSE - Split Fitting Bonding Solvent 4oz Can - \$99 List

* Sikaflex Fitting Sealant, part number AC Sika10, is specified with RigidFlex Fittings and the recommended volume is 1 (one) 10oz tube per: 2 Large housing, 3 Medium housing, or 4 Small Housing fittings.

* For filled fitting option, add "-F" after the part number. Reference "Fill Volume Estimate Chart" at the ZJI web page.

Installation Note: When installing Brugg pipe with the Brugg pipe fitting on the pipe previous to the sump entry, a larger sized boot is specified as shown in the part number charts. To finish the installation, split reducing inserts are used inside the mouth of the boot to close in the extra space. The split inserts are installed over the pipe and bonded into place inside the boot with AC FastFuse, making the fitting complete and solid for a tight seal on the pipe. Simply apply the AC FastFuse solvent liberally to the insert split and sides before pushing into the mouth of the boot. Tighten the band clamp. No cure time is required to move forward on the process. Please contact ZJI for clarification on installation instruction and certification training. Warranty eligibility is based upon installation by a ZJI Certified Technician.
